

**K281AZ**

- 60 dBu contour for K281AZ (KML)
- 60 dBu contour for K281AZ (filled)

**Notes and Comments:**

- AM daytime groundwave contours are based on the use of the  $M_3$  conductivity map only. No measurement data is considered.
- AM critical hours and nighttime groundwave and skywave coverage contours are not available at this time.
- TV service contours are based on the use of the  $F_{(50,90)}$  propagation curves and represent the noise-limited area of digital TV service.
- AM, FM, and TV Service Contours plotted here may differ from evaluations performed by the staff on individual proposals or allocations.
- AM and FM service does not stop at the contour. An AM or FM station oftentimes can be heard at locations well beyond the service contour.
